

Claims: Claims 27 and 57 are amended in this office action response. Additions are indicated by underlining. Deletions are indicated by strikethroughs. No claims are cancelled in this office action response. No claims are added in this office action response. Upon entry of these amendments, claims 27-31 and claims 57-69 will be pending in this application.

**CLAIM LISTING:**

Claims 1-26 (cancelled)

27. (currently amended) An electronic scanning device, comprising  
an image sensor for scanning an image;  
a display that displays a first part of a scanned version of said image; and  
a navigation sensor ~~that~~ to optically detects ~~detect~~ relative movement  
between said scanning device and a surface in close proximity to said navigation  
sensor whereby said relative movement changes said display to displaying a  
second part of said scanned version of said image.

28. (original) The electronic scanning device of claim 27 wherein said relative  
movement may also move a cursor displayed on said display.

29. (previously presented) The electronic scanning device of claim 27 wherein  
said second part of said scanned version of said image is scrolled in relation to  
said first part of said scanned version of said image.

30. (previously presented) The electronic scanning device of claim 27 wherein  
said second part of said scanned version of said image is panned in relation to  
said first part of said scanned version of said image.

31. (original) The electronic scanning device of claim 27 wherein said second  
part of said scanned version of said image is displaced in two directions in  
relation to said first part of said scanned version of said image.

HP Docket Number 10991692-1

SN 09/471,810

**Claims 32-56 (cancelled)**

**57. (currently amended)** A method of previewing a scanned image, said method comprising:

displaying a first part of a scanned image;

optically detecting relative movement between a scanning device and a surface in close proximity to said scanning device;

displaying a second part of said scanned image in response to the optically detecting the relative movement between a scanning device and a surface in close proximity to said scanning device.

**58. (previously presented)** The method of claim 57 wherein said second part of said scanned image is scrolled in relation to said first part of said scanned image.

**59. (previously presented)** The method of claim 57 wherein said second part of said scanned image is panned in relation to said first part of said scanned image.

**60. (previously presented)** The method of claim 57 wherein said second part of said scanned image is displaced in two directions in relation to said first part of said scanned image.

**61. (previously presented)** An electronic device comprising:

a display located on a first side of said electronic device;

a navigation sensor located on a second side of said electronic device, said second side being opposite said first side, wherein said navigation sensor detects movement of a part of a user relative to said navigation sensor located in close proximity to said navigation sensor, and wherein an image displayed on said display is altered in response to said movement of said part of said user relative to said navigation device.

62. (previously presented) The electronic device of claim 61 wherein said image displayed on said display is altered in response to said movement by moving an image of a cursor.

63. (previously presented) The electronic device of claim 61 wherein said image displayed on said display is altered in response to said movement by panning a second image displayed on at least part of said display.

64. (previously presented) The electronic device of claim 61 wherein said image displayed on said display is altered in response to said movement by scrolling a second image displayed on at least part of said display.

65. (previously presented) The electronic device of claim 61 wherein said image displayed on said display is altered in response to said movement by showing a different part of a second image, at least part of which is displayed on at least part of said display.

66. (previously presented) The electronic device of claim 61 further comprising:  
a first button, whereby said movement of said part of said user and said first button may be operated in cooperation to mimic at least one function of a computer mouse being used with a graphical user interface.

67. (previously presented) The electronic device of claim 66 wherein a graphical user interface is being displayed on said display.

68. (previously presented) The electronic device of claim 66 further comprising:  
a second button, whereby said movement of said part of said user, said first button, and said second button may be operated in cooperation to mimic more than one function of a computer mouse being used with a graphical user interface.

69. (previously presented) The electronic device of claim 68 wherein a graphical user interface is being displayed on said display.
